Selecting Domain-Specific Controls

Policy authors identify risks in different domains that significantly impact their organization. Creating a control using content wizard is a content action which provides the freedom to choose the industry standards, frameworks, and regulatory controls. A user can choose a regulation to build controls that can be enforced implicitly within a domain. Stakeholders use the content pack to assess the standard controls and subcontrols by performing various workflow stage actions such as draft, test and approve prior to control deployment.

To select domain-specific controls:

- In the RiskVision application, go to Controls > Controls and Questionnaires, and select the desired controls group. In the RiskVision application, go to Risks > Controls and Questionnaires, and select the desired controls group. In the RiskVision application, go to Policies > Controls and Questionnaires, and select the desired controls group.
- 2. Select New Controls with Content Wizard in the Actions pull-down list to launch Create New Controls by Content Wizard, displaying the Regulations wizard page.
