Threat Management Preferences

The **Threat Management Preferences** page is where you control email alert notifications of new vulnerabilities and other features of the **Threat and Vulnerability Manager**. You can choose the recipients and email templates for threat management alerts. Alerts are optionally sent after each vulnerability scan and when updates are received from vulnerability feeds. Tickets can be automatically created for newly updated vulnerabilities. **Threat Management Preferences** is also where you manage groupings and dynamic groups of entities (entities) based on their shared properties. You can set the **Threat Management Preferences** only if you have the Threats and Vulnerabilities View and Manage permissions.

PREFERENCE		DESCRIPTION
Send notification when a vulnerability matches my environment	To Recipients	Select a team of users to receive alerts by email.
	Using Email Template	Choose **No Email**, or select an alert template (such as Threats Advisory Alerts).
	Vulnerabilities from Scanners	Include vulnerabilities from scanners in email notifications.
	Vulnerabilities from Feeds	Include vulnerabilities from feeds in email notifications.
When a vulnerability is assigned to a user, send notification using:	Email Template	Choose **No Email**, or select an alert template (such as Threats Advisory Alerts).
When vulnerabilities are updated:	Automatically create tickets	Check the box to automatically create tickets
	Create tickets only if no patch is available for the affected entity	Check the box to create a ticket if a patch is unavailable for the affected entity.
	CVSS Score >=	Create a ticket when vulnerabilities have a CVSS score greater or equal to a specified value.
	Acknowledge the vulnerability when tickets are automatically created	Check the box to automatically acknowledge vulnerabilities when tickets are created.
	and assign the vulnerability to	Select a user the vulnerability will be assigned to.
Ticket default due dates based	High	Default: 10 days after today

onvulnerability risk level		
	Medium	Default: 30 days after today
	Low	Default: 90 days after today
Ticket Reminders	Send reminder to owners	Check to send a reminder to ticket owners.
	After	Specify the percentage of ticket timespan to have elapsed before sending reminder. Default is 50%.
	Using Email Template	Choose **No Email**, or select an alert template (such as Threats Advisory Alerts).
Send a notification to the vulnerability owner when all its tickets are closed	For Vulnerability severity level	Choose **All, High-only, Medium and High,** or **None**.
	Using E-mail Template	Choose **No Email**, or select an alert template (such as Threats Advisory Alerts).
