## **Review Non-Validated Technologies**

The National Vulnerability Database (NVD) uses Common Platform Enumeration (CPE) identifiers to represent information technology systems, software, and packages. Whenever an identifier is brought into RiskVision, such as from a vulnerability scanner, with identifiers that differ from the NVD identifiers, RiskVision treats these technologies as non-validated technologies. Before these non-validated identifiers can be mapped to a technology, you will first need to review them.

## To review non-validated technologies:

- 1. Open Threat and Vulnerability Manager.
- 2. Go to Technologies > All Technologies.
- 3. Click Review Non Validated Technologies. The technologies with validated flag 'No' will appear.

Review Non Validated Technologies
Connectors sometimes use technology identifier which doesn't match to the known set of platforms defined in the Common Platform Enumeration(CPE) dictionary. Review these technologies and assign then to the correct technologies.

The Search Technologies pane.

- 4. Click a technology to open its details page.
- 5. Click Edit in the upper right-hand corner of the window.
- 6. Click the General tab.
- 7. Click Yes next to the Validated option.
- 8. Click Save.
