Vulnerabilities from Scanners or Users

The **Vulnerabilities from Scanners or Users** page is a grid available on the **Vulnerabilities** menu within the Threat and Vulnerability Manager. It's only visible if you have the Threats and Vulnerabilities View permission. This grid contains vulnerabilities reported by scanners as well as users. The vulnerabilities reported by users appear in this grid only when a vulnerability affects an entity. To view the actions available in this grid, see Performing Actions in Vulnerabilities Grids .
