

Known Issues

Last Modified on 05/14/2018 4:55 pm EDT

- **Heading text becomes the title for the subsequent text. Because titles are of plain text, custom styling of Headings is lost.**
 - **Tables, nested lists, headers, footers, indexes, bookmarks and other Word features may not import perfectly, or at all.**
 - **Stylized bullets lose their style when imported. That is, special bullet characters, color, or custom indentation do not import. Bulleted lists are imported as HTML lists.**
 - **Microsoft Word allows heading styles in table cells but RiskVision does not allow the heading styles.**
 - **It is impossible to import a document, which contains more than 3,999 characters in the Description field.**
-
