

About Discovered Entities

The Discovered, Managed and Unmanaged dynamic groups provide dynamic subgroups that categorize entities by entity type, application, computer, and so on. Entities first show up in the Discovered dynamic group when they are discovered by a connector or created from imported entities.

To move discovered or unmanaged entities to the Managed group:

- Click **Manage** in the **Status** dropdown list in the **General Detail** display for a particular entity.
OR
- Click the **Manage** node or any **Manage** node subgroup and click **Start Managing These Entities**.
OR
- Click **Manage Entities** from the **More Actions** menu.

Entities require a minimum of a hostname or IP and a domain to be included in the display of discovered or managed entities.
