

## Performing Entity Actions

Entities can be managed in the **Entities** and **Entity Collection** grids. Entity actions are visible only if you have the Entity View and Entity Manage permissions. The actions provide a convenient way to update all of entities in a dynamic group where multiple entity attributes can be updated simultaneously, newly discovered entities can be allowed to participate in assessments, and entities can be excluded from participating in assessments.

The following table lists different actions and their purpose:

Action	Description
Manage Entities	Entities imported into RiskVision application must be managed before you include them in assessments.
Unmanage Entities	Refrains entities from participating in assessments.
Add Operating System to Entities	Adds operating system information to entities. Use the <b>Choose Operating System</b> dialog to search and select the operating system. For information about how to add the operating system to entities, see <a href="#">Operating Systems</a> .
Remove Operating System from Entities	Removes operating system information from entities.
Add Application to Entities	Adds application(s) to entities. Use the <b>Choose Applications</b> dialog to search and select the applications. For information about how to add the application to entities, see <a href="#">Applications</a> .
Remove Application from Entities	Removes application(s) from entities.
Copy Entity	Creates a copy of an entity into the selected assessment. While copying choose whether to copy an entity's attributes. Or use this action to copy an entity's data to other entities.
Batch Edit Entities	Select multiple entities to update common attributes simultaneously. By using the <code>com.agiliance.asset.batchoperations.size</code> property, users can set the size of the batch up to a maximum of 50.
Save as CSV	Export entities out of the RiskVision application in Excel format.
Show Relationship Graph	Display a graph showing the relationship between the selected entities.
Run Contextual Report	View a contextual report of the selected entities.

The **Export Entities** option is configurable. If you have a lot of entities, you can choose to turn off the **Export Entities** option. This can be done by modifying the property `ui.asset.grid.export.enable`

If `ui.asset.grid.export.enable` = True, then **Export Entities** appears in the **More Actions** drop-down.

If `grid.csvexport.all` = True, then the users will be able to export entities to CSV files.
