System E-mail Templates

The following variables are available to designers of this type of email template:

Variable	Description
email	The email object gives the designer access to the setSubject method, which takes a string that can include other variables.
userName	The recipient of the email, usually a stakeholder in the current workflow.
workItemName	The name of the workItem.
projectName	The name of the program associated with this notification.
projectDescription	The description of the program associated with this notification.
appurl	The URL of the RiskVision application.
$jobName	The name of the scheduled job about which the status will be sent to the stakeholder.
$jobStartTime	The date and time that a scheduled job has begun the execution.
$jobEndTime	The date and time that a scheduled job has finished the execution.
$jobDuration	The amount of time between the start time and end time of a scheduled job.
$jobNextExecutionTime	The date and time that a scheduled job will run again in the future.
$jobErrorDescription	The description of the error that resulted in the failure of a scheduled job.
