

Create and Delete Relationship Types

From version 7.0 and later, you can create and delete relationship types when the `com.agilance.asset.enableCreateRelationshipTypes=true` property is added to the `agilance.properties` file. You can only delete relationship types that are not in use.

To create a new relationship type:

1. Go to **Configuration > Entity Configuration** to open the **Relationships** tab.
2. Click **New**.
3. Enter the following fields.
 - **Relationship Name:** Name of the relation between entities.
 - **Inverse of Relationship:** Name of the reverse relationship.
 - **Description:** The purpose of this relationship type.
4. Click **OK**.

User-defined relationship types allow the establishment of a relationship between entities only.

To delete a relationship:

1. Go to **Configuration > Entity Configuration** to open the **Relationships** tab.
2. Select a custom relationship type that is not in use, then click **Delete**.
