## **Create and Delete Relationship Types**

From version 7.0 and later, you can create and delete relationship types when the com.agiliance.asset.enableCreateRelationshipTypes=true property is added to the agiliance.properties file. You can only delete relationship types that are not in use.

## To create a new relationship type:

- 1. Go to Configuration > Entity Configuration to open the Relationships tab.
- 2. Click New.
- 3. Enter the following fields.
  - Relationship Name: Name of the relation between entities.
  - Inverse of Relationship: Name of the reverse relationship.
  - **Description:** The purpose of this relationship type.
- 4. Click OK.

User-defined relationship types allow the establishment of a relationship between entities only.

## To delete a relationship:

- 1. Go to Configuration > Entity Configuration to open the Relationships tab.
- 2. Select a custom relationship type that is not in use, then click **Delete**.
