

Enable Organization Hierarchy Selection

When you create a node under the organization hierarchy tree, the new node will not be available for selection in the entity wizard or to be assigned to an organization group on an existing entity. Configure the following properties to enable its selection:

1. `entity.organization.assignment.through.hierarchy= [true |false]`

This property displays the new organization hierarchy in the entity details pane when it is set to true. By default, the property is set to false.

2. `entity.organization.through.hierarchy= [true |false]`

This property allows you to select new organization hierarchy in the entity wizard when it is set to true. By default, the property is set to false.
