

Import Entity Collections

Using the `EntityImportTemplate.xls` file, you can also import entity collections into RiskVision application.

Guidelines:

The following guidelines should be followed strictly when using the `EntityImportTemplate.xls` file to import entity collections.

1. Open the `EntityImportTemplate.xls` file, ensure that you are in the **Entity Map** sheet, and specify "EntityCollection" in the **Object type** and **assetType** fields. There can be no space between "Entity" and "Collection."
2. Go to the **Entity** sheet and enter "Entity Collection" in the **Asset Type** of each corresponding row. There must be a space between "Entity" and "Collection."

Importing entity collections will just import the entity collections and not its members. To import entities as members, you will once again need the `EntityImportTemplate.xls` file. Afterwards, you use the `EntityRelationshipImportTemplate.xls` file to import the Member of Entity Collection relationship type. For more information, see [Importing Relationships](#). This procedure helps complete the process of importing entity collections and its members. You may want to visit the **Entities** tab of **Entity Collection** details page to ensure that entities you imported are available.
