

## Create a Control Target Profile

Control target profiles are sets of instructions that match up applicable controls and questions with entities based on their attributes. Users with **Profile View** and **Profile Author** permissions can create control target profiles and set which entities are targeted by introducing target conditions. Once created, the profile will be available for attachment.

Target conditions are not added at the creation phase of control target profiles. This means that newly created control target profiles will match all entities. To match profiles to specific entities, you must add target conditions as described in [Configuring Target Selection Options](#).

### To create a new control target profile:

1. On the **Content** menu, click **Control Target Profiles**.

*The Control Target Profiles screen.*

2. Expand the **Organization Content** tree in the **Control Target Profiles** pane on the left hand side of the screen and select the group you wish to add the new profile to.
3. Click **New Profile** to display the **Create Profile** window.

The screenshot shows a 'Create Profile' dialog window. It has a blue title bar with the text 'Create Profile' and a red close button. The main area contains two input fields: 'Name:' with a text box and 'Description:' with a larger text area. At the bottom right, there are two buttons: 'OK' and 'Cancel'.

*The Create Profile window.*

4. Enter a name for the control target profile in the **Name** field.
5. **Optional:** Enter a description of the control target profile in the **Description** field. Descriptions will appear next to the profile on the group's details page.

6. Click **OK**.

Control target profiles must be applied at the subcontrol level, rather than the control level. They will only apply at the control level if they have been applied to all of that level's subcontrols.

▲ Attaching a profile directly to the control level will result in the profile being lost at the control and subcontrols level. This means that only the subcontrols that were available before the creation of a control target profile will retain the profile.
