

Change the Password for JasperReports Server

RiskVision is using four different accounts to facilitate the tight integration with JasperReports Server. We recommend changing the default passwords for each of these accounts. The three accounts are as follows:

1. ReportUser - Used to query data for reports.
2. sysadmin - Used to perform administrative actions on the JasperReports Server.
3. rvJasperUser - Used to query the JasperReports Server APIs from RiskVision and Jaspersoft Studio.
4. PostgreSQL- This account is the root account for PostgreSQL and is used to back up the JasperReports Server database.
