

Change the Date and Time Format

RiskVision allows you to change the date and time format, which appears on the detail pages of RiskVision objects. By default, RiskVision displays the date and time in the `YYYY-MM-DD` format. To change the date and time format to `MM:DD:YYYY`, add all the following properties in the `agiliance.properties` file:

- `ui.clientDateTimeFormat=MM-dd-yyyy HH:mm:ss`
- `ui.clientDateOnlyFormat=MM-dd-yyyy`
- `ui.clientTimeOnlyFormat=HH:mm`

These changes will be applied across the RiskVision application, but you cannot change the date and time format individually for each RiskVision object.
