

Define a New Location for the Images Folder

Whenever a custom image is embedded in an object, such as a dashboard or policy, you may risk losing the custom images stored in the directory `%AGILIANCE_HOME%\Tomcat\webapps\spc\images` after upgrading RiskVision. To avoid this issue, we recommended changing the images folder location from `%AGILIANCE_HOME%\Tomcat\webapps\spc\images` to `%AGILIANCE_HOME%\config\images`.

To change the images folder location:

1. Go to the directory `%AGILIANCE_HOME%\config` and open the `agiliance.properties` file using a text editor.
2. Add the following property:
`image.custom.folder=<%AGILIANCE_HOME%\`
3. Specify a folder name to which you want to copy the images.
4. Restart the RiskVision Tomcat service.
