

## Change the JasperReports Server Passwords

RiskVision uses four different accounts to facilitate a tight integration with JasperReports Server. We recommend changing the default passwords for each of these accounts. The accounts are:

1. **ReportUser:** Used to query data for reports.
2. **sysadmin:** Used to perform administrative actions on the JasperReports Server.
3. **rvJasperUser:** Used to query the JasperReports Server APIs from RiskVision and Jaspersoft Studio.
4. **PostgreSQL:** This account is the root account for PostgreSQL and is used to back up the JasperReports Server database.
