

Organizational Hierarchy Overview

The names and relationships of divisions, departments, and other organizational units within an enterprise can be modeled in RiskVision, and individual organizational units can be associated with other components of the system.

The screenshot shows a dialog box titled "Organizational Hierarchy" with a yellow folder icon on the left and "Save" (green checkmark) and "Cancel" (red X) buttons on the right. The "General" tab is selected in a blue sidebar on the left. The main area is titled "Information" and contains a "General" section with two input fields: "Name*" (a single-line text box) and "Description" (a larger multi-line text box with a diagonal slash icon in the bottom right corner).

The New Organization Group screen.

Organizational units represent a "tree" of nodes. Each node has a single parent node and may have child nodes.

When adding an organization hierarchy node to a profile or other component, use 'Contains.' Do not use the '==' operator.
