

Understanding Operational Vulnerabilities

An operational vulnerability is a potential risk that appears in the Risk Configuration > Operational Vulnerabilities tree. An operational vulnerability can be created only if your user role has Risk View and Risk Author permissions.

To create a Vulnerability:

1. In the RiskVision application, go to **Risks > Risks**. In the RiskVision application, go to **Content > Risks**.
2. Select **Operational Vulnerabilities** in the **Risk Configuration** tree.
3. Click **New**. Enter **Title** and **Description**. **Clicking to enter the text in the Description** field displays the **Description** dialog (rich-text editor). After entering the text, click **OK** to exit the **Description** dialog.
4. Click **Save**.
