

Setting the Host Name

The RiskVision solution inserts the public hostname or IP address value in e-mails/notifications that use the application URL variable \$appurl. Enter a fully qualified domain name or Internet hostname if users access the RiskVision solution.

To set the host name:

1. In the Administration application, go to **Administration > Server Administration > Configuration**.
2. Click **Edit**.

The screenshot shows the RiskVision Administration application interface. The top navigation bar includes 'Administration', 'Users', and 'Events'. Below this, a secondary navigation bar lists 'Server Administration', 'External Authentication', 'SAML Configuration', 'Notifications', 'Connectors', 'Email Templates', 'Queued Jobs', and 'About this page'. The main content area is titled 'Server Administration' and contains a 'Configuration' section. On the left, there is a sidebar with a server icon and a menu with options: 'Information', 'Configuration' (selected), 'Commands', 'Support', 'Health Report', 'Documentation', and 'About'. The 'Configuration' section displays the following information:

- Server Name**
 - Operating system: Windows Server 2008 R2
 - Local hostname: QA32-2K8
 - Local IP address(es): 10.11.1.32, 0:0:0:0:0:0:1
 - Public hostname or IP address:
- Session Timeout**
 - Session Timeout:

Informational messages are displayed in blue boxes:

- 'This is used to create web links to the application in notification emails.'
- 'After a period of inactivity, user has to login again from the browser. The value is in minutes.'

At the bottom right of the configuration area, there are 'Save', 'Cancel', and a refresh icon.

3. In the **Public hostname or IP address** field, type the IP address in dotted quad format (such as).
4. Click **Save**.

The web link for Notification E-mails URL is updated.

5. Click on the URL to test the link.
