

Events

Events are informational system messages that the RiskVision solution has logged. Each event is categorized as Console, Server, or Connector, and its Severity is classified in terms of Information, Warning, Audit, or Error.

An Event operation can be:

- Authentication
- Authorization
- Assessment
- Entity
- Connector
- Control
- File Export
- File Import
- Filter
- General
- Group
- Incident
- Policy
- Risk
- Schedule Job
- Server Admin
- UI Customization
- User
- Vendor

Events displayed in a tabular grid are shown below.

Administration		Users		Events

Filtering Events

Because there can be a large number of events, you can filter events using a combination of following ways:

- Archived Events
- Filter by column value
- Restrict by date range
- Find related events (events involving the same resources)
- Log Level
- Error
- Warning
- Information
- Audit

Viewing Event Details

The Event View permission is assigned to the Administrator role, by default, to view event details. The Events grid displays the event information for all types of operation. Objects, such as users and connectors have an Events tab to particularly view the full cycle of information.

To view events:

1. On the **Events** menu, click **Audit Events**.
2. The **Events** page is displayed.

Event: System Jobs.System User Maintenance

General >

Event Information

Title System Jobs.System User Maintenance
Category Server
Time 2014-08-18 23:20:35
User or object  Custom Charts Author
Severity 
Level Level 2
Action Start
Where scheduledjob.general
Description N/A

Objects involved

Object 1 N/A
Object 2 N/A
Object 3 N/A
Object 4 N/A
Object 5 N/A

3. After finding an event you want, check the box on that row and click **Details**.
