## Default Dynamic Groups

The following table provides a brief description of the default groups available. To add, update or delete a custom defined dynamic group or a pre-configured group, you must have the Entity View and Entity Manage permissions.

| Dynamic Group                | Description   |
|------------------------------|---|
| Type of Entity               | Groups by Type and Subtype.   |
| By Criticality               | Groups all entities based on the business criticality score,<br>which is, the average of the user defined CIAA (Clas-<br>sification > Security Requirements > Confidentiality, Integ-<br>rity, Availability and Accountability) rating. |
| By Operating System          | Groups computers and network devices by operating sys-<br>tem settings (Entity Details > System Details).   |
| By Subnet                    | Groups computers and network devices by the specific<br>interface subnet range. (The range is calculated using the<br>subnet mask set on the System Details > Network > Net-<br>work Interface details panel.)                          |
|                              | If the subnet mask is null, the device shows in the top level<br>folder only, even if the IP address is within a recognized<br>range. Overlapping ranges are grouped separately.  |
| All Vendors                  | Lists all vendor type entities.   |
| All Processes and Objectives | Lists all process type entities for use with ERM method of risk assessment and calculation.   |
| Active Directory             | Groups Domain entity types. While using the AD Con-<br>nector to import Active Directory data, the entities are<br>automatically structured.  |
| My Entities                  | Lists all entities that the current user is assigned to as any type of owner.   |
|                              | User access is also limited by filters assigned to them and their roles.  |
| Recently Viewed              | Contains the last ten entities the current user viewed.   |
|                              | Configure the maximum number of entities in the Recently<br>Viewed group which is configured in the .properties file.   |
| My Favorites                 | Entities that you identified as a favorite by clicking the Favorites link on the entity's detail page.  |

| Newly Discovered Entities | Groups discovered entities (that is, an entity with the Gen-<br>eral > Entity Management > Status of Discovered) by oper-<br>ating system, network subnet, and entity type.<br>When a connector finds a new entity and imports the<br>details, the entity status is set to Discovered. |
|---------------------------|--|
| Unmanaged Entities        | Lists unmanaged entities ( an entity with the General ><br>Entity Management > Status of Unmanaged).<br>Many of the default groups are filtered by Managed status.<br>They show only entities that have the Managed status.  |
