

Understanding Organizational Hierarchy

The names and relationships of divisions, departments, and other organizational units within an enterprise can be modeled in RiskVision, and individual organizational units can be associated with other components of the system.

The screenshot shows a software window titled "Organizational Hierarchy". At the top right, there are "Save" and "Cancel" buttons. On the left, a blue sidebar contains a "General" tab. The main area is titled "Information" and has a sub-section "General" with two input fields: "Name*" (a single-line text box) and "Description" (a larger multi-line text box).

The New Organization Group screen.

Organizational units represent a "tree" of nodes. Each node has a single parent node and may have child nodes.

When adding an organization hierarchy node to a profile or other component, use 'Contains.' Do not use the '==' operator.
