

Controlling Object Visibility

Many default and user-defined objects contain the **Applications** tab in their details page to help you control the visibility of an object in the RiskVision applications. Though you possess sufficient permissions to access the application and the menu item, the object will not be visible to you if the application is not selected in the details page of that object.

To control an object's visibility:

1. In the RiskVision application, select the object containing the **Applications** tab.
2. Click the **Applications** tab.
3. Click **Edit** and select boxes next to application(s).
4. Click **Save**. The object is now visible in the application(s) you have selected in the previous step.
