

Defining More Complex Selection Conditions

The Selection Criterion editor can be used to specify complex AND and OR conditions. In addition, parentheses can be used to [specify sub-conditions](#).

For example, if you create three conditions, such as **Priority** \neq **Medium**, **Owner** = **John**, and **Type** = **Audit Finding**, you can choose:

CONJUNCTION	DESCRIPTION
AND	All conditions must be true to select this workflow.
OR	This workflow will be selected if any of the conditions are true.
XOR	Exclusive OR. Select the workflow if one of the conditions is true, but not if more than one is true.

The screenshot shows the 'Selection' tab of the 'Ticket Workflow' editor. On the left, a navigation menu includes 'Definition', 'Stages', and 'Selection'. The main area displays three conditions: 'Priority' (Not equals Medium), 'Owner' (Equals John), and 'Type' (Equals Audit Finding). A dropdown menu shows 'OR' is selected as the conjunction. At the bottom, there are buttons for adding a new condition (+) and a sub-condition (+ {}).
