

RiskVision Report Execution Time-Out

In the RiskVision Server, by default, the time-out values are set to 3600000 Milliseconds in the following properties, available in the `agiliance.default.application.properties` file.

```
com.agiliance.common.DatabaseConnectionManager.database.socket.timeout
```

```
com.agiliance.common.DatabaseConnectionManager.database.connection.timeout
```

You can override the time-out values by adding the properties mentioned above to the `agiliance.properties` file.
