

Email Templates

Email templates are provided for HTML and plain text alert notifications. New templates can be created for special purposes. Email templates include variable references and commands such as `#foreach` in order to embed system data in custom content.

This example illustrates part of a plain text alert notification email.

EXAMPLE

You want to create a plain text alert notification email.

```
#if ($macs && 0 != $macs)

##

#set($totalAlerts =
$details.getTotalAlerts('ASSESSMENT_COMPLIANCE_SCORE'))

#set($newAlerts =
$details.getNewAlerts('ASSESSMENT_COMPLIANCE_SCORE'))

##
```

Example alert on an assessment compliance score:

There are `$totalAlerts.size()` assessments that fell below the minimum compliance score `$details.threshold.get('ASSESSMENT_COMPLIANCE_SCORE')`. `$newAlerts.size()` of them are new violations since the last alert. They are listed below:

```
#foreach($project in $details.alertsByProject)

##

#set($totalAlerts = $project.getTotalAlerts('ASSESSMENT_COMPLIANCE_SCORE'))

#set($newAlerts = $project.getNewAlerts('ASSESSMENT_COMPLIANCE_SCORE'))

##

#if ($newAlerts && 0 != $newAlerts.size())

project: $project.projectName, total: $totalAlerts.size(), new: $newAlerts.size()

project details: $project.projectDetailsUrl

#foreach($alert in $newAlerts)
```

`alert.entityName: alert.score (alert.entityDetailsUrl)`

`#end`

`#end`

`#end`

`#end`
