

Version 9.2 Bug Fixes

- Clicking multiple times to add or delete owners no longer slows the UI (RRV-3185).
- Policy workflows now only transition once stakeholder percentage requirements have been met (RRV-2788).
- Exception request notification templates are now visible in the Threat & Vulnerability module (RRV-2471).
- Assessment links in email notifications are no longer broken (RRV-2461).
- A new option in Administration > Commands allows users to clear the control-related cache without restarting Tomcat. This option addresses a bug that prevented users from deleting imported controls (RRV-2453).
- Fixed an issue that caused tabs to be collapsed by default, even when configured to be expanded (RRV-2437).
- Exception request reminders are now only sent to stakeholders with email notifications enabled (RRV-2383).
- Upgraded the Jetty web server to fix CVE-2009-4611 (RRV-2458).
- Resolved an issue that prevented files from being processed in the Maximo connector when using the `asset.mapping.properties` file (RRV-2332).
- The Events log no longer displays duplicate entries for failed logins (RRV-1837).
- Fixed a bug in ERM reports that would display incorrect "In Use" statuses for risks and controls (RRV-1728).
- Corrected an issue that produced error messages when customizing thresholds in an Individual Risk Scale (RRV-1364).
- Filters are now correctly applied in the Search Entities tab in the New Entity Assessment window (RRV-69).
