

Activate a Connector in RiskVision Using SAML

Legacy connectors installed in RiskVision will not be able to establish communication using SAML SSO. In order for SAML to work, these connectors must first be activated.

To activate a connector:

1. Navigate to the %AGILIANCE_HOME%\Connectors\Server- side\cfg directory open the **connector.properties** file.
2. Set `server_host` as %_AGILIANCE_HOST_NAME_%.
3. Restart the connector services to affect the latest changes.
