

## Set the Criticality Rating

The **Security Requirements** section allows you to manually set the entity criticality.

The screenshot shows the 'Classification' tab in a software application. The left sidebar contains a navigation menu with items: General, Assessments, Owners, Description, Addresses, Classification (highlighted), Costs & Impact, Vulnerabilities, Vulnerabilities List, Relationships, Propagation, Documents, Data Feeds, and Exceptions. The main content area is divided into sections: 'Business Criticality' (Business Criticality: Unknown), 'Security Requirements' (with a Refresh button), 'Classification' (with dropdowns for Classification Label, Type Of Data, Environment Type, and Internal or external), 'Tags', and 'Change History'. The 'Security Requirements' section has radio buttons for Confidentiality, Integrity, Availability, and Accountability, each with options for Unknown, Low, Medium, and High. The 'Classification' section has dropdown menus for Classification Label, Type Of Data, Environment Type, and Internal or external.

*The Security Requirements section of the Classification tab.*

For discovered entities, you can configure a Control Target Profile to automatically set this value.

Criticality is not set when importing vulnerabilities from a saved XML file, even if the vulnerabilities were exported with criticality information. Vulnerabilities can be imported into other entities, and the criticality cannot be assumed.

Clicking on the **Refresh** button will manually update the confidentiality, integrity, availability and accountability values of the entity.

These settings are used for:

- Automatically reassessing entities;
- Calculating the simple risk and compliance scores; and
- Calculating the Business Criticality score.

## To set the criticality rating:

1. Go to **Entities > Entities**.
2. Select a group.

Home	Entities	Assessments	Content	Analytics	Configuration	Show Graph	Entity name	Search
Entities	Entity Collections	Group Definitions	Entity Management					
<b>Entities</b> My Entities Actions		Entities 1-2 of 2 New Details Delete More Actions...						
<ul style="list-style-type: none"> <li>Entities with IP Addresses</li> <li>My Entities</li> <li>Organization Hierarchy</li> <li>My Favorites</li> <li>Recently Viewed</li> </ul>		<input type="checkbox"/> Show IP Address Filter by - Show all - Refresh						
		Name	Type	Subtype	Criticality	Owner	Description	
		<input type="checkbox"/> DesktopID1012	Computer	N/A	<input type="checkbox"/>	pavani B	N/A	
		<input type="checkbox"/> E1	Application	N/A	<input type="checkbox"/>	pavani B	N/A	

*The Entities list.*

3. Select an entity, then click **Details**.
4. Click the **Classification** tab, then click **Edit**.
5. Select the desired radio button in the **Security Requirements** section,
6. Click **Save**.
