# Identity Provider Pre-Requisites

Resolver does not support the use of Identity Providers (IdP), which means users must configure them on their own. In order to configure RiskVision SSO, users must obtain the following information from the IdP:

- IdP metadata

- SAML attributes:

    - **uid**

    - **surname**

    - **givenName**

    - **mail**

- IdP entity ID

In addition to the above, it is also necessary that the Service Provider (SP) provide the following to the IdP:

- Assertion Consumer Service URL

- SP entity ID

- SP metadata

If any of the above elements are missing, contact your IdP or SP.
