

Delete Entities

To delete an entity, you must have the Entity-View and Entity-Delete permissions. You can either delete one entity at a time, or all entities in a group.

To select which entities to delete:

1. Go to **Entities > Entities** and select an entity group.
2. Select the checkbox next to each entity you wish to delete.
3. Click **Delete**, then **OK**.

If there are any linked objects on one or more of the selected entities, they will be listed in the pop-up window asking you to confirm.

To delete all entities in an entity group:

1. Go to **Entities > Entities** and select an entity group.
2. Select **Delete All** from the **More Actions** dropdown list.
3. Click **OK**.

The pop-up window asking you to confirm will display the name of the group the entities are a part of.
